

NEWS ALERT

Cortec® VpCI®-609 Powder Featured in June Issue of Pollution Equipment News!

High-Tech Vapor Inhibiting Compound Cortec Corporation, St. Paul, Minn.

VpCI609 powder boasts high quality and superior performance. It electrochemically stops the corrosion process. The product is a water-soluble

powder for wet or dry corrosion protection of ferrous and aluminum metals for a minimum of 24 months without deterioration – and no need for regeneration. Powder is made with moderate vapor pressure so it easily volatilizes, subliming directly to a vapor that seals metals with a chemically adsorbed monomolecular film, protecting inaccessible and recessed surfaces.
