Cortec® VpCI®-325 Featured in August Issue of New Equipment Digest!

Bio-Based Rust Preventive protects internal system parts

Ready-to-use VpCI-325 rust preventive, based on a vegetable-derived, biodegradable oil, provides general-purpose corrosion protection. It forms a film on the metal surface and also releases vapor phase corrosion inhibitors into the air above the oil. The vapors condense and form a protective barrier on surfaces not contacted by the liquid product, offering complete protection for internal system parts.
