## Cortec® VpCI® - 337 Featured In February Issue of Materials Performance Magazine.

### Water-based vapor phase corrosion inhibitor

Cortec Corp. (St. Paul, Minnesota) has released VpCI-337, a water-based vapor phase corrosion inhibitor that offers protection in virtually any situation. Ideally suited for protection of internal void spaces, exposed surfaces, and internal packaging, the inhibitor offers multi-metal protection with no future need for removal. Because VpCI-337 is water-based and will not clump, it can be used for equipment with complex geometries such as boilers, heat recovery steam

generators, and pressure vessels. Phone: +1 651-429-1100, Web site: [www.cortecvci.com](http://www.cortecvci.com).
