**PRESS RELEASE**

## Have a Corrosion Headache?...Take a Pill!

### Cor-Pak® Tablets powered by Nano-VpCI®

**Get rid of rust headaches forever with Cor-Pak® tablets - a powerful corrosion inhibitor to protect metals**

Even though your first connection to pills was probably some sort of medical treatment, Cortec® is about to change this trend. Our expert team of chemists and engineers launched a revolutionary “anti-corrosion“ pill called Cor-Pak® Tablets – the best cure to all corrosion diseases. By using this little, super-economical yet strong preventative, conventional expensive methods of applying and removing coatings can now be eliminated forever.

Cor-Pak® Tablets provide an extremely efficient dry method of protecting metals within a package.

Using Vapor phase Corrosion Inhibitor (VpCI®) technology, these easy-to-use tablets provide more than two years of premium multi-metal corrosion protection. Just a few tablets need to be dropped into a bag, box, or package. Cor-Pak® Tablets powered by Nano-VpCI® are nitrite, phosphate, and silicate free, making them safe to use and apply.

**With Cor-Pak<sup>®</sup> Tablets carbon and stainless steel, aluminum, copper, silver, brass, and solder will be protected from corrosion for more than two years**

After the VpCI<sup>®</sup> vaporizes, it will attach to all metal surfaces, reaching even recessed areas. The protective monomolecular layer does not need to be removed prior to processing or operation. If opening the package disturbs the layer, it will be replenished by continuous vapor protection upon reclosing. The VpCI<sup>®</sup> layer does not interfere with the operation of electrical and electronic components.

Cor-Pak<sup>®</sup> Tablets are designed to protect products, components, or assemblies when packaged in corrugated boxes, plastic wrap or bags, and metal, plastic, or wood containers. They will also protect from salt water during overseas transport. Protected parts can be used immediately.

Cor-Pak<sup>®</sup> Tablets will protect up to 7.1 liters (0.25 cubic feet) of enclosed space per tablet. They are easily inserted in packaging by manual or automated systems. No spraying, wiping, dipping, surface preparation, or regeneration is required.

**Some additional applications are:**

- Completed assemblies, parts, and components
- Sensitive electrical, electronic equipment, and controls
- Marine and commercial electronic equipment
- Interior of lighting fixtures
- Motors and mechanical controls
- Tools, spare parts, and components
- Nuts, bolts, nails, screws, and fasteners

**Ionic action of VpCI<sup>®</sup> creates a molecular, corrosion inhibiting layer.**

Cor-Pak<sup>®</sup> Tablets conform to NACE Standard TM 0208-2008, MIL-I-22110C, and are RoHS compliant.
